STECKLER'S COTTON SEED

Selected Varieties

Planting time, March and April. One bushel is required to plant one acre. Thoroughly break and prepare the ground early. Rows should be 3½ to 4 feet apart and hills 12 to 14 inches apart in the row. When the cotton comes up it should be off-barred deep while it is small in order to let the heat of the sun strike the beds. As the plants get larger, shallow down and towards the last, cultivate very shallow. Always keep the top crust of the ground broken in dry weather, as it prevents it from losing its form. Never stop plowing for wet weather until the ground turns in slices; then quit immediately until it dries off. Never lay by until the middle of August. The first week in April has been found to be the best time for planting cotton.

NOTE:—All of our Cotton Seed is free from Boll Weevil. These are all good varieties which have been thoroughly tested and recommended by Agricultural Colleges and Experiment Stations of the Southern States.

STRAWBERRY SHOOKS or DIRT BANDS

STRAWBERRY SHOOKS OR DIRT BANDS. Eggplants, Muskmelons and Early Cucumbers pay well if they come early into the market. In order to have them early, it is a good plan to start them in a cold frame in what are called "Dirt Bands." This is a box 4 inches square and 4 inches deep, without bottoms. These are placed in a frame and filled up with good rich soil, and five or six seeds in each box. When the plants come up, thin them out to one or two in each box. Before using dirt bands, wet them thoroughly before bending or they will be apt to break at the grooves, as they are made of thin veneered wood. 60c per 100; \$3.00 per 1000, not prepaid. Tacks for Dirt Bands and Boxes, ¼ lb. 15c; lb. 50c, postpaid.

STECKLER'S WHEAT

It is not a pest and can be easily eradicated and reseeds itself each year under favorable conditions. It is used as a summer cover crop and soil builder in groves, orchards, vineyards, etc. Livestock will not eat it, therefore you will not be tempted to cut it for hay when your ground needs it so badly. This should be planted as soon as danger of frost is past and at a time when there is plenty of moisture in the soil, and can be planted as late as July, either broadcast or drilled. Ten pounds of seed is required per acre for broadcasting and half of that amount if drilled. Grows from 5 to 10 feet depending entirely on the locality. Price: 30c per lb., postpaid. In 10 lb. lots at 16c per lb.; 25 lbs. at 13c per lb., not prepaid.

BEAUTIFY YOUR HOME GROUNDS YOU CAN HAVE FLOWERS ALL SEASON

Flower seeds require a little more care in sowing than the vegetable seed. The ground should be well pulverized and light enough not to bake after a rain. Some of the more delicate and finer varieties are better sown in boxes or seed pans, where they can be handled and protected from hard rains or cold weather, the other kinds do not transplant well, and are better sown at once where they are to remain.

All flower seeds in packages are mailed free of postage to the purchaser. Where there is more than one color, we generally import them mixed, as we find that most of our customers do not wish to purchase six packages or more of one variety to get all colors. One package of Asters, Zinnia, Phlox, Chinese Pink, Stocks, Petunia, Portulaca and others will always contain an equal mixture of the best colors.
